Background:	centrosomal protein 135(CEP135) Homo sapiens This gene encodes a centrosomal protein, which acts as a scaffolding protein during early centriole biogenesis, and is also required for centriole-centriole cohesion during interphase. Mutations in this gene are associated with autosomal recessive primary microcephaly-8. [provided by RefSeq, Jun 2012],similarity:Belongs to the CEP135/TSGA10 family.,
