<b>Background:</b>	Guanylate binding protein expression is induced by interferon. Guanylate binding proteins are characterized by their ability to specifically bind guanine nucleotides (GMP, GDP, and GTP) and are distinguished from the GTP-binding proteins by the presence of 2 binding motifs rather than 3. [provided by RefSeq, Jul 2008],function: Binds GTP, GDP and GMP.,induction: By interferon gamma during macrophage activation.,similarity: Belongs to the GBP family.,
