**Background:** Consecutive histidine residues (usually 6 to 10 in length) are often inserted into the amino acid sequences of recombinant proteins. The resulting His-tagged proteins can be detected or purified by using anti-His antibodies.

Western blot analysis of recombinant His Tag protein using HRP-conj. Mouse anti His-Tag at dilution of 1:5000.  
Lysates/proteins: 25ug per lane.  
Blocking buffer: 3% nonfat dry milk in TBST.
