Background:	This gene encodes a protein that contains a C2H2-type zinc finger, coiled-coil region and arginine, serine-rich (RS) domain. A similar protein in mouse interacts with sodium channel modifier 1, and the encoded protein may be involved in the recognition of non-consensus splice donor sites in association with the U1 snRNP spliceosomal subunit. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Sep 2011],function:May bind to RNA via its Arg/Ser-rich domain.,PTM:Phosphorylated upon DNA damage, probably by ATM or ATR.,similarity:Belongs to the Luc7 family.,similarity:Contains 1 C2H2-type zinc finger.,
