<b>Background:</b>	This gene likely encodes a member of the arginine/serine-rich splicing factor family. A similar protein in Rat appears to bind the large subunit of RNA polymerase II and provide a link between transcription and pre-mRNA splicing. Alternatively spliced transcript variants have been described. [provided by RefSeq, Feb 2009],function:May act to physically and functionally link transcription and pre-mRNA processing.,similarity:Belongs to the splicing factor SR family.,similarity:Contains 1 CID domain.,similarity:Contains 1 RRM (RNA recognition motif) domain.,subunit:Interacts with the repetitive C-terminal domain (CTD) of RNA polymerase II.,
